Attendees: Jason (CEO) . John (CFO) . Greg . Jodi . Justin

AGENDA: 30 minutes - 3 segments + Q&A

1. THE DATA (5 min) - What we found

- 25 incidents YTD 2026, 4 recordables, 2 lost time
- Core pattern: 48% of incidents in first 90 days - entirely temp/agency employees
- Second pattern: veteran employees (2+ yrs, 32% of incidents) = complacency, not training
- Both sites (Vanceburg + Huntingdon) have the same reporting gaps - no unified system

2. WHAT WE'RE BUILDING (10 min) - The systems

- Unified incident reporting - same form, same 5-why, both sites (show blank template)
- Live corrective action tracker - every action has an owner, due date, status. No more email chasing. (share link)
- Safety walk checklist - standardized walks with audit trail
- New-hire orientation checklist + Vests Until Verified program (temp + direct hires)
- 'Pause & Think' culture shift - reward hazard reporting, never punish
- Corrective action training for supervisors - the 3-question test

3. THE ASK (5 min) - What I need from leadership

- Aligned message: corrective actions must fix the SYSTEM, not the person (Bonnie Swim example)
- Support for the HEPA vacuum + saw for RCF furnace cutting - cost analysis ready
- Reinforce: 'Red is not bad' - hazard reporting is safe, encouraged, rewarded
- Org chart alignment with the EHS Leader role (moving)

4. KEY PHRASES & Q&A PREP

'Red is not bad - we want to find problems so we can fix them before someone gets hurt.'

- Cost question: 'Most systems are process changes, not capital costs. The only current capital ask is a HEPA vacuum for furnace RCF cutting - cost analysis ready.'
- Timeline question: 'The data will move over the next quarter as the systems take hold. We will know within 90 days if the first-90-day pattern is breaking.'
- Huntingdon question: 'I am visiting early December. First trip is observation and relationship-building.'
- Tracker question: 'It is a live web tool - I update it, managers can view it anytime. No downloads, always current.'
