WEEKLY SAFETY SHARE #2

Topic: Corrective Actions - What makes a good one?

FOR THE SUPERVISOR - Read aloud or paraphrase to your crew.

OPEN (1 min):
"You all know we had Bonnie go to the hospital Saturday after tripping on a pallet. She is okay, but that incident showed us something: the corrective action written was watch where you walk. Lets talk about why that does not fix anything."

THE POINT (2 min):
"A corrective action needs to answer: would this fix prevent the same thing from happening to someone else? If the answer is no, it is not a corrective action. Watch where you walk only applies to Bonnie. Marking the walkway and pallet zone applies to everyone."

INSTEAD OF THIS...	USE THIS
Watch where you walk	Paint walkway markings
Be more careful with pallets	Mark pallet storage + clear walkway
Dont let it get that bad again	Add walkway to weekly safety checklist

DISCUSSION (2 min):
"Think about a close call you have seen recently. If you wrote the corrective action, what would it be? Would it pass the fixes it for everyone test?"

CLOSE (30 sec):
"If you see something that needs fixed - a hazard, a process, a near-miss - tell your supervisor. We cant fix what we dont know about. And if you write a corrective action, ask yourself: could this happen to someone else tomorrow?"

Supervisor note: Keep this conversational, not a lecture. Use your own examples from this week. The goal is to get people thinking about system fixes, not blaming individuals.
